

Assessment

Module 04: WD - HTML

Module 05: WD - CSS and CSS3

Module 06: Website Designing - HTML5

Module 07: WD - Bootstrap Basic and Advanced (Basic Javascript)

Case Overview

Scenario:

You are a junior web developer at Hashcrypt technologies Pvt. Ltd. The company wants to digitize its Customer Interaction System to make it faster and paperless. Your task is to build a responsive web page and handle its UI using JavaScript.

Feature	Description
Responsive Web page	Create an HTML/CSS using a fluid layout with tabular concepts Header ,Navbar, slider and content. Use Flexbox or Grid for mobile-friendly layout.
Form Labels & UI Elements	Created or added some forms such as account form and login form Include proper labels, placeholders, and Submit & Reset buttons.
Validation (JavaScript)	- All fields are required. - Email must be valid format. - Phone must be exactly 10 digits.
Data Storage	On successful validation, store data in localStorage as a list of submissions.
Form Reset	Clear the form after submission.
User Feedback	- Show success message when data is saved. - Show error messages near fields when validation fails.
View Submissions Page	On index.html, read data from localStorage and display in an HTML table with columns: Name, Phone, Email, Vehicle, Complaint.
No Data Handling	If no data exists in localStorage, show “No data available” message.

Key Competencies Tested

- HTML5 Form Design & Responsive Layout
- JavaScript Input Validation
- DOM Manipulation & Dynamic Rendering
- localStorage CRUD Operations
- Clear User Feedback on Errors & Success

Reflective Thinking Questions

- How would you improve data validation and user feedback in real-world apps?
- Could regular expressions, inline tooltips, real-time validation, or third-party libraries improve user experience?
